

**Changes to the MANN+HUMMEL ProVent 200 / 2020-I-24****ProVent Conversion Kit: LC5001/2X**

Dear Customers,

We would like to inform you about an imminent design change of our ProVent 200 System. The new ProVent 200 will be known as the **ProVent 200 IV**. The 'IV' is in reference to the new 'internal ventilation' characteristics of this new design.

**The specific design changes to the ProVent 200 system are:**

1. Inclusion of the new LC5001/2X element design which has an over pressurisation valve integrated into it.  
(Patents, designs, trademarks applied for)
2. Revised inner lid design which has the over pressurisation valve deleted.  
(Patents, designs, trademarks applied for)

In addition to the new system design, we will also be launching the new LC5001/2X KIT. This new service kit will essentially be a conversion kit, which will upgrade all current ProVent 200 systems to the new ProVent 200 IV design.

It is important to understand that the parts needed will be included in each carton at no additional fee. Customers will have the opportunity to convert their ProVent 200 systems to the new design for no additional cost.

**The new LC5001/2X KIT will include:**

1. The new LC5001/2X element design with integrated over-pressurisation valve
2. Replacement O-ring for system lid
3. Replacement inner lid conversion kit
4. Simple system conversion instructions
5. Replacement ProVent 200 IV label

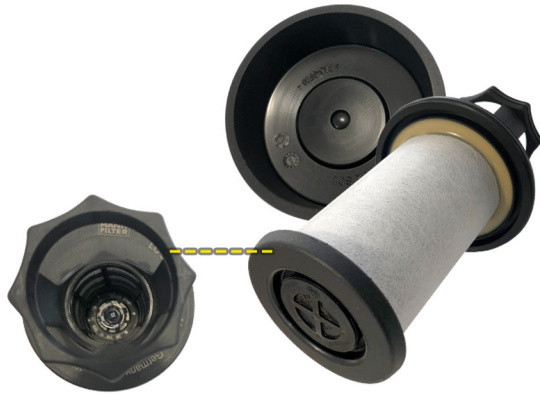

**Important considerations when selling LC5001/2X KIT service kits:**

- Installing an LC5001/2X (IV element) in a standard ProVent 200 which is not converted to the IV design is 100% safe to do.
- Installing the old LC5001X element into an IV system will eventually cause over pressurisation of the crankcase when the element is blocked. This is because the system will no longer have an over pressurisation valve. It is critical that this element is not sold to a customer who has an IV system and is the reason why we will cease supply of the LC5001X element in time.

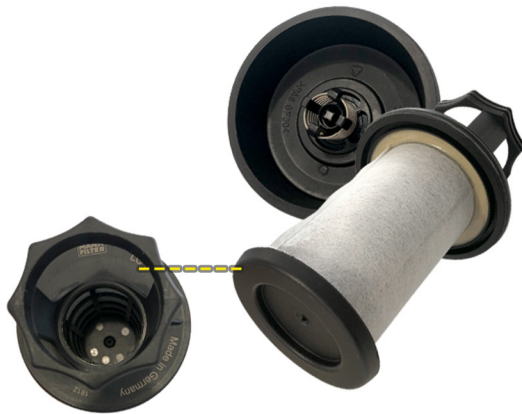

**Changes to the MANN+HUMMEL ProVent 200 / 2020-I-24**

**ProVent Conversion Kit: LC5001/2X**

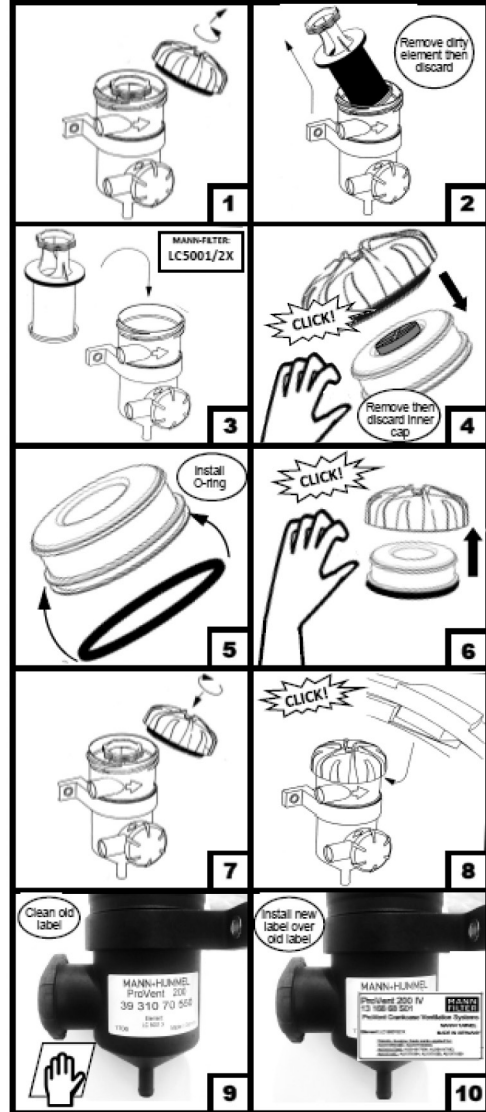

**2020: PROVENT 200 IV**

**2019: PROVENT**

**ProVent 200 IV Conversion Instructions.**

**WARNING:** Only install LC5001/2X after conversion completed.

MANN+HUMMEL Australia Pty. Ltd.

We hope that you see these extensively protected design changes as a step forward in the evolution of what is the world’s most successful crankcase ventilation system. Please do not hesitate to contact us should you have any further questions.

Yours faithfully,  
MANN+HUMMEL Australia Pty. Ltd.
